How to Enhance Writing with the Help of Technology in the Clasroom

Sharipova Munira Isroiljon's daughter

Namangan State University, The faculty of World Languages, Junior teacher

Abstract: The article discusses the benefits of technologies in order to improve writing skills in the classroom.

Keywords: Plagiarism, Blog, Writing-Enhancement Platforms, e-Books and Noise-Cancelling Headphones.

This is an open-access article under the CC-BY 4.0 license

Using technology to advance writing in the classroom is the goal of my research. After doing my research and compiling my data, I feel that word processors ought to be included in every classroom to help students—particularly those with difficulties with their motor skills—because my research shows that students are more likely to write because the act of writing is easier. I had to watch, speak with, and survey teachers and students as they used technology to improve their writing for the research. The findings showed that students could improve their writing with the use of technology by starting self-revisions and adding more accurate detail to their writing. After analyzing all of the data I gathered for my study, I came to the conclusion that integrating technology into the classroom is crucial for teaching students to write and for enhancing their writing abilities. Here are a few extracts from notable writers and educators on how technology can enhance writing in the classroom:

Ann Handley highlights in her book "Everybody writes": Your Go-To Guide to Creating Ridiculously Good Content that "everyone is a writer" and that effective marketing is built around good content." She describes a methodical approach to content creation that begins with knowing your audience, defining your message, and arranging your thoughts before you begin writing. She emphasizes the significance of writing with your audience in mind and using language they can relate to and find interesting. She also emphasizes how crucial editing and revision are to polishing your writing. Handley talks about the importance of storytelling in writing. She provides advice on how to write gripping stories that captivate readers and hold their attention. Writing for Digital Formats: The book offers advice on constructing text for various digital platforms, such as email newsletters, blog entries, and social media updates. Handley provides guidance on how to modify your writing for every platform in order to get the most out of it. Technology and Devices: Handley touches on the use of a variety of digital tools, such as content management systems, style guides, and grammar checkers, to assist writers, though this is not the main topic. She exhorts writers to use these resources to improve both the process and product of their writing. She offers advice on how to do this and keep it consistent with various kinds of content. Best

practices for optimizing content for social media sharing and search engines (SEO) are covered in the book. Handley provides helpful advice on how to create catchy headlines, leverage keywords wisely, and increase the share ability of content. Exercises and Practical Advice: Handley provides readers with checklists, exercises, and practical writing advice throughout the book to help them become better writers and produce better content. [1]

Here are a few extracts from notable writers and educators on how technology can enhance writing in the classroom:

“Technology offers powerful tools for writing, such as spell checkers, thesauruses, and automatic formatting, that enable students to focus more on their creativity and less on mechanical skills. However, the true power of technology in writing comes when students can collaborate in real-time, access authentic audiences, and receive meaningful, immediate feedback on their work.” said Marc Prensky (Education Author and Innovator). [2]

According to Will Richardson (Educational Blogger and Speaker) “The Web is a publishing platform. No longer is writing confined to essays for the teacher’s eyes only. Instead, students can write blogs, publish podcasts, create multimedia presentations, and participate in real-world writing, thus transforming their sense of purpose and audience. Technology engages students in writing for a broader, more meaningful audience. [3]

As for Shelley Wright (Teacher and Educational Consultant), “Technology has fundamentally changed the way students write. The ability to use digital platforms to draft, revise, and share writing creates a much more dynamic, interactive experience. Writing becomes collaborative as students and teachers communicate more frequently about the writing process, and peer review becomes much more integrated into everyday practice. [4]

When it comes to Sir Ken Robinson (Educator and Author), “The use of technology in the classroom, especially for writing, isn’t just about making things more efficient. It’s about offering new opportunities for students to express their ideas, develop their creative potential, and engage in deeper thinking and communication.”[5]

These extracts highlight how technology can transform the writing process, encouraging creativity, collaboration, and real-world application.

As it is well known, even for the most seasoned writers, writing is a difficult skill. Rather, it requires patience, tenacity, and an openness to learning. Sometimes, honing our writing abilities can take years. This means that anyone can, for instance, read a book and comprehend someone who is reading it aloud to them or who speaks about it later to someone else, but not everyone is able to write a book. Rather, it requires patience, tenacity, and an openness to learning. However, there are certain tools, like technology, that make this process go more quickly. Our writing abilities can now be further enhanced and adjusted to thanks to a wide range of digital tools like noise-canceling headphones, e-books, plagiarism checkers, writing-enhancement platforms, and more. [6]

First, make use of Plagiarism Checker. "Using the appropriate sources is essential to writing a fantastic essay; if we don't, we risk being found guilty of plagiarism. Plagiarism can have serious repercussions depending on its extent, so we should always try to avoid it. Thankfully, a plagiarism checker allows us to ensure that our work is entirely original, removing any doubt that we haven't improperly borrowed ideas or content from the internet and providing us with the comfort that our masterwork was written entirely by us. [7]

Creating our own blog is the second method. Our own personal blog can serve as a platform for us to try out different writing techniques. It is our own little project, kept strictly for personal use, where we can experiment with various writing styles to see which ones suit us the best. Alternatively, we can set a writing challenge for ourselves and write about a topic we are not

familiar with, which forces us to modify our usual writing style into something more esoteric. We can write about things that we are passionate about.

With the aid of writing – enhancement platforms is the third. Even though we are very good at telling stories and drawing readers in, our grammar and spelling are not always precise. Using a writing-enhancement platform like Grammar will allow us to check that our writing is free of any grammatical errors, which could be the one small detail that elevates our work to a higher grade if we would like to improve our writing skills.

Furthermore, many of these writing resources are free, we can write better without spending any extra money. Next way is with e-Books "Writing an essay can be an almost impossible task for students to complete." untold number of textbooks with us, but technology can address that problem. Consider purchasing e-Books instead, since we can keep them all in one place. We can practice writing without having to carry around a ton of books by using a convenient place, like our phone or a Kindle device. Students all across the world have had their backs saved by this tip, and they will continue to do so in the future. [8]

The final one is using noise-canceling headphones. Although it has no direct bearing on how well we write writers who must work in noisy or distracting environments may find it to be of great assistance. We frequently find it difficult to put our ideas on paper when writing in a noisy setting, which prevents us from doing our best work. However, we can minimize the distractions and improve our writing skills with a good pair of noise-cancelling headphones. [9]

Although technology has benefited in countless ways, it is truly a lifesaver when it comes to writing. Technology has made it possible for us to write better, regardless of whether we have trouble with basic grammar or want to try out different writing styles.

Overall, after examining all of the data gathered for my study, I have concluded that using technology in the classroom to support writing instruction is crucial. If we make the writing process engaging for the students, they can enjoy it. When they use technology for writing, they take pleasure in what they are doing.

In my next research, I would speak with more teachers from all grade levels to find out how they use technology in the classroom and whether they believe it enhances their students' writing kills. In my research, I paid more attention to my personal experiences and the technologies I adeptly employed in the classroom. It would also be interesting to compare the thoughts of new teachers versus teachers who have been teaching for a bit of time.
